

Eva Hajičová: Corpus Annotation: Sentence and Discourse  
NGSLT, Riga March 16-20, 2009

### Course material and acknowledgements

The course material presented here consists of powerpoint presentations and of one literary text as a material for a detailed discourse analysis along the lines presented in the lectures.

The presentations are divided as follows:

- (1) Underlying layer of syntactic relations and their description in sentence annotation
- (2) Information structure of the sentence and its annotation in the Prague Dependency Treebank
- (3) Coreference in the sentence and in the text
- (4) From the structure of the sentence to discourse patterning

The material is based on the research carried out by researchers and PhD students at the Institute of Formal and Applied Linguistics of the Faculty of Mathematics and Physics, Charles University in Prague, Czech Republic, especially under the support of the projects MSM 0021620838 and GACR 405/09/0729. Gratefully acknowledged is the contribution of Lucie Mladova, Anja Nedoluzko, Barbora Vidova Hladka and Sarka Zikanova to the contents and outer shape of the slides; also the technical support of Anna Kotesovcova is highly appreciated.

It would be helpful if the participants of the course prepare beforehand translations of the sample English text into their native languages
